

Press release - Paris, 21st October 2025

Calogena welcomes the signing of a nuclear collaboration agreement between France and Finland

On 20 October in Luxembourg, Finnish Minister of the Environment and Climate Sari Multala and French Minister of the Economy, Finance and Energy Transition Roland Lescure signed a declaration of intent to establish long-term, diversified cooperation between Finland and France in the field of nuclear energy.

The priority areas for cooperation include the construction of small modular nuclear reactors for heat production, strengthening the security of supply of fissile materials and fuels, and developing safe solutions for radioactive waste management.

Calogena welcomes this major initiative, which validates its positioning in nuclear heat production for urban networks. Calogena is currently developing its solution in five cities, three in France and two in Finland. The district heating operators in Helsinki and Kuopio have launched a nuclear heating program.

By clearly positioning itself in export markets, particularly in Finland, Calogena brings with it all of France's nuclear excellence in the service of decarbonization.

Calogena is committed to strengthening nuclear collaboration between France and Finland.

About Calogena

Calogena is a subsidiary of the Gorgé industrial group, which specializes in high-tech industries and is driven by a strong entrepreneurial culture. Calogena was founded in 2021 with a unique mission in response to the challenge of energy transition: decarbonizing heating networks. In order to provide a solution on a scale commensurate with the problem, which can be deployed on a large scale, Calogena is developing a low-power boiler powered by nuclear energy. Its main benefit is a significant reduction in greenhouse gas emissions for heat production. Its compact, simple and safe design enables Calogena to aim for the fastest possible deployment, as early as 2030.
